

PeopleOne Personal Pharmacist Q & A

What is it and what can I expect?

What is PeopleOne Personal Pharmacist?

PeopleOne Personal Pharmacist is a service that provides members direct access to a clinical pharmacist to help them address medication-related concerns

Why should I meet with the pharmacist?

You may benefit from meeting with our pharmacist if you want to review medications you currently take, have questions about your medication regimen, or are interested in learning more about the medicine you are putting into your body.

Why is it only offered to Ohio medical plan employees?

The pharmacist has their license in the state of Ohio, however, you may ask your health coach these questions and they will be able to advocate on your behalf.

Why is this a referral from my health coach? Why can't I just meet with them?

Your health coach might be able to answer your question for you! They have an extensive healthcare background and can provide insight to many medical related questions.

What if I don't take medicines, how can a pharmacist help me?

If you take dietary supplements or over the counter products, our pharmacist may be able to still provide insight about these products to help you in your health journey.
